

One residual solver across 14 PDE / inverse tests

No named-equation solver dispatch. No interior solution labels in forward solves.

3D transient NS: blue = velocity, gold = pressure over space-time. Final time pressure error: 2.8×10^{-5} .
Smooth / resolved tests, several with manufactured forcing. Polynomial controls perform similarly.
Timings are individual local runs, not evidence of a speed advantage over PINNs or classical solvers.

Exact-polynomial control 3D NS pressure
