

Native nonlinear 2D Navier-Stokes · 4,365 tanh neurons · 360 independent coefficients

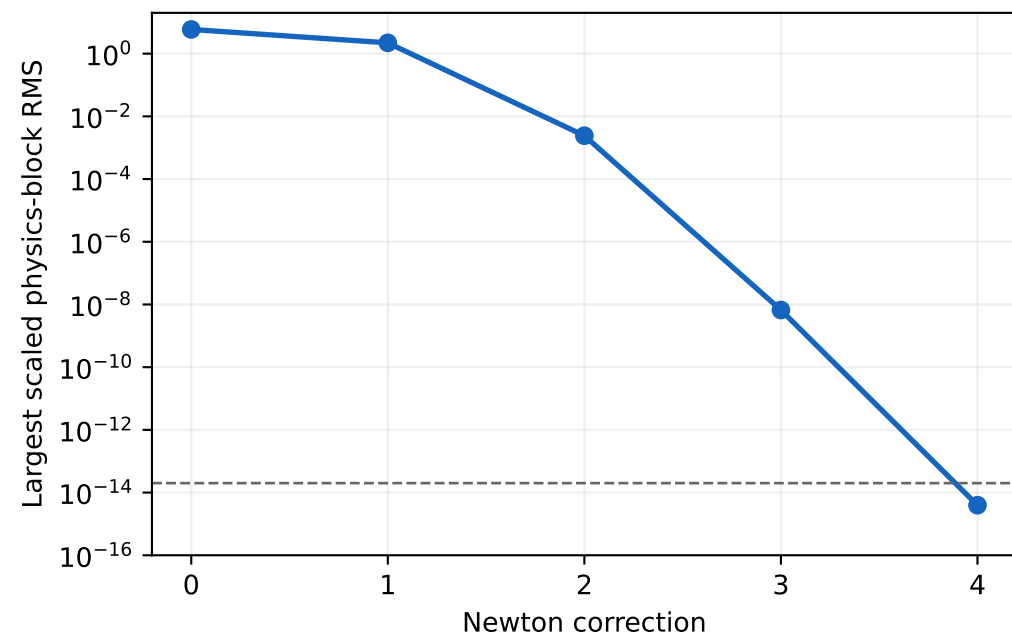

Ordinary tanh network: no-slip flow

Error against analytical check

Solve starts from zero coefficients

Fresh-point ordinary-network check: velocity relative L2 $3.46\text{e-}15$; pressure $9.29\text{e-}15$; momentum RMS $1.96\text{e-}14$.
Prescribed body force + zero wall velocity + pressure gauge; no interior labels or external PDE solve. Dashed line: solve tolerance.
